

Counter electrodes for charging technology

- 1 Earthed material (counter electrode with contact)
- 2 Earthed counter electrode, passive Ionizer (without contact)
- 3 Ionizing bar as counter electrode (without contact), active counter electrode
- 4 Blast air operated system (for great distances / without contact), active counter electrode
- 5 Reciprocal pole charging (without contact), active counter electrode

Technical Remark:

The material must definitively be discharged before charging.
